

Safety Chain Connection Devices (D-Shackles)

In June 2017, the Administrator of Vehicle Standards released a Circular to provide assistance for owners and operators in selecting an appropriate safety chain connection device for a road trailer of up to 3,500 kg ATM. This guidance material was developed with the agreement of state and territory regulators in order to provide a uniform approach in Australia to the use of safety chain connection devices (e.g. D-Shackles etc).

You can view the Administrators Circular 0-1-3 by clicking [HERE](#). It is recommended that industry businesses follow the guidance outlined within the circular when choosing and sourcing these types of connection devices.
